Held-out check 1: breadth-ML correlation
(real is LOW because breadth peaks mid-axis)
real = 0.01
Spearman rho(breadth, ML)
0.1
0.0
−0.1
−0.2
−0.3
A. ML-only (graded)
B. + uniform trait
C. + position-dependent broadcast
Held-out check 2: RSP+ORB broadcast contrast
real = 2.93
breadth contrast: both - single
